

Credit Name: Charpet 3

Assignment Name: Mastery

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem

How did you approach understanding the challenge?

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

I approached understanding the challenges by reading them in the text book then really thinking about how I would use java even before actually writing the code

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding?

How did you decide on the tools, data structures, or algorithms to use?

I used the method of blueprinting the code before writing. The way i decided on how to make the code was usually following the methods used in W3 schools

Implementation

Did you write the code in small pieces or attempt the entire solution at once?

How did you test your solution along the way to make sure it was working?

I wrote the code all at once because i had the mental blueprint. I kept looking for code that was underlined or had an x next to it then figured out what went wrong

Overcoming Challenges

What part of the problem was the most difficult for you?

How did you handle moments when you felt stuck or unsure of what to do next?

it wasnt that difficult to make the codes but when every i was confused i would use W3 schools

Learning

Was there anything you learned that you think will help you with future challenges?

To use W3 schools more often
